Who We Are

- Computer engineers with advanced graduate degrees who have decades of experience working with computers and network environments.
- Attorneys with 25 years of combined litigation experience and expertise in e-discovery and criminal / civil litigation.
- Former federal and state law enforcement officers with advanced graduate degrees, who have successfully investigated hundreds of cases prosecuted in state and federal courts, and who were recognized by the Department of Justice for their efforts.
- Adjunct Faculty from Marshall University Forensic Science Center in Computer Forensics
- Creative designers who have taken on creative projects for JP Morgan Chase, Visa, Pfizer, Inc., and Parke Davis among many others.

Our team is committed to the success of your business and will work tirelessly to earn your confidence and trust. With customized service and competitive rates, we want to be your first call for all your technology needs.

Simply put, we're professionals who bring a wide variety of skills and talents from different backgrounds together to focus on the technical, legal and creative needs of our clients. From a dynamic Web design to emergency data recovery to managing the complexities of computer forensics, our team prides itself on having the creative ability and technical skills that allow our clients to succeed in a highly-competitive and increasingly technical business world.

Partners

Second Creek Technologies is proud of its ongoing partnership with Marshall University's Computer Forensic Section of the Forensic Science Center. The Marshall University Forensic Science Graduate Program was founded in 1994, and today is one of only seven such Master of Science

degree programs in the country and one of only three to be accredited by the Forensic Science Education Program Accreditation Commission (FEPAC).

The Forensic Science Center occupies a state-of-the art facility on the campus of Marshall University, boasting digital evidence laboratories and cutting edge computer equipment. As one of only three programs in the United States that is accredited to offer a Master's Degree in Forensic Science, this reciprocal relationship not only strengthens the discipline of computer forensics, but also creates the next generation of electronic investigators.

By sharing faculty, staff and resources, this cooperative agreement allows Second Creek to stay abreast of the latest computer forensic technology and is a great example of how private/public partnerships can work and benefit both parties.

Computer Forensics + Electronic Discovery

From Wireless Internet to iPods, the world has embraced digital technologies. Our legal system, long geared towards the production and retention of paper, is now playing "catch up" to the world's new electronic environment. The explosion in electronic methods of creating, communicating,

and managing electronic data has re-invented the meaning of the term "document" in the context of discovery and document production.

Second Creek Technologies draws upon our staff's years of civil and criminal investigation experience and multiple graduate degrees in computer engineering to provide a cutting edge resource in the new field of legal investigation merged with computer forensics. Using state-of-the-art computer forensic tools in our secure computer forensic laboratory allows Second Creek to maintain your evidence in an environment that is optimal for analysis, chain of custody and admissibility in court.

The lawyers, investigators and engineers of Second Creek stand ready to assist with your computer forensic needs. In today's world, you don't want your opponents' file cabinets – you want their hard drive. The "smoking gun" of your case may now be found in a maze of digital information that Second Creek Technologies can locate, sift through, preserve and help present to your jury.

We can now offer you the ability to conduct a native file review and to search all the files in a litigation support database. The personalized and secure database we create for you will permit redactions, annotations, highlights and categorizations of the evidence. All these services and features

translate to the most efficient, cost-effective compliance with court-ordered discovery.

Forensic Accounting

Second Creek's lead financial investigator holds an MBA and is a retired IRS Special Agent with 24 years of field experience investigating fraud, money laundering as well as many other complex financial crimes.

Second Creek's forensic accounting service can help you with:

- Criminal Investigations
- Shareholders' and Partnership Disputes
- Business Interruption / Other Types of Insurance Claims
- Business/Employee Fraud Investigations
- Matrimonial Disputes
- Business Economic Losses

Web Design

Second Creek is a full service web design and development firm. We offer all the services needed to develop and maintain a successful web site including:

- Flash
- Programming
- Corporate Identity
- Photography
- Search Engine Optimization
- e-Commerce
- Hosting & Maintenance

Since no website is ever truly finished, we believe our job has only begun with the launch of your site. Second Creek Web Design offers a variety of maintenance plans that will suit your needs, meet your demands and grow with your business. We can take the hassle out of keeping your content fresh and your site design interesting.

- We specialize in designing and developing web sites that are engaging and user-friendly.
- We offer superior copy writing and photography attuned to the special needs of the medium and your requirements.
- We offer a full range of hosting and long-term maintenance plans when it comes time to put your site on the web.
- If you have a corporate identity, we'll transfer it to the web. If you want us to help you create a corporate identity, we'll do that too.
- Our programming skills encompass all the current programming languages in use on the Internet.
- We optimize your web site to make sure that it's highly visible on search engine utilities such as Google and Yahoo.
- If you want to join the thousands of businesses involved in e-Commerce on the Web, we'll create an e-Commerce site for you.

Our designers understand what works and what doesn't, not only on the web but in other mediums as well. We'll work with you to create not just a logo, but an identity for your business or organization that you'll be proud to use and that customers will not forget. Second Creek pays special attention to the appropriate use of

Flash. We understand the power of the application to draw the user into the web site and we're careful to make sure our Flash presentations inform and educate those who visit your site.

Second Creek Web Design can leverage your online presence, whether we build your site from scratch or redesign your existing site. Our site designers and copywriters will design, program and script your site to help your potential customers quickly find you on the web through search engine queries. Second Creek Web Design's search engine optimization services will improve your search engine visibility and enhance search engine results.

IT Services

Managed Services

With budget dollars already going to purchase expensive computer equipment, not every business can employ a full-time IT person. Second Creek's experienced staff can solve this problem through our Managed Services. With a diverse skill set, your business will benefit from our veritable "tool box" of computer experts, including deployment of new technology, maintenance and troubleshooting.

Our Managed Services include:

- **On-Site Support:** We have a wide range of support options available from support during normal business hours to support 24 hours a day.
- **Remote Support/ Administration:** We are just a phone call or email away. Using the latest technologies, we can support your system pro-actively and from any distance.
- **Application Installation and User Training:** We can also help you with the installation of new software and training of new users across your network and organization.
- **Wide Area Management:** If your company has multiple offices in multiple locations, we can help. Let our extensive experience in managing integrated networks over wide areas give you a competitive advantage.

Networking

Whether you're a small company with a new network or a large company with a well established system, computer systems require careful planning in their purchase and adequate maintenance in order to work effectively. The staff at Second Creek has extensive experience in designing and deploying network environments. Regularly scheduled maintenance can save your company time and money by preventing work stoppages and information loss from threats such as hardware failure, spyware and viruses.

Our networking services include:

- LAN and WAN networks (design / installation / configuration / maintenance / monitoring)
- Secured Wireless networking
- Linux/Unix servers
- Windows desktops and Server
- Exchange Server
- Terminal Services
- Internet Information Services (IIS)
- Internet Security and Acceleration Server (ISA / Proxy Server)
- SQL Server
- Virtual private networking (VPN)
- PC Sales & Support
- Managed services and more...
